

HEMASRI

Senior Frontend Developer | Angular | React | TypeScript | Micro-Frontend | 6+ Years

Salem, Tamil Nadu, India | +91 9952688512 | srihemasurya@gmail.com

linkedin.com/in/hemasrioofficial | hemasri-dev.netlify.app | Available: Immediate Joiner

PROFESSIONAL SUMMARY

Senior Frontend Developer with 6+ years of hands-on experience designing, developing, and deploying production-grade Single Page Applications (SPAs) using Angular 14+ and React 18 for government and enterprise clients. Expert in TypeScript, JavaScript ES6+, RxJS, NgRx, Redux Toolkit, React Hooks, Reactive Forms, and Micro-Frontend architecture using Module Federation (Webpack 5). Proven track record of architecting scalable component libraries, building real-time data visualization dashboards with ApexCharts and Recharts, integrating RESTful APIs, and delivering 25–30% measurable performance improvements through lazy loading, code splitting, OnPush change detection, memoization, and bundle optimization. Strong advocate of WCAG 2.1 accessibility standards, responsive design, and cross-browser compatibility. Skilled collaborator across Agile/Scrum teams, mentoring junior developers and partnering with backend, QA, and design stakeholders. Available immediately for Senior Frontend Developer, Frontend Engineer, Angular Developer, React Developer, or Full Stack UI roles — open to remote, hybrid, on-site, and relocation.

TECHNICAL SKILLS

Frontend Frameworks: Angular 14+, Angular CLI, Angular Material, React 18, React Hooks, React Router v6, Next.js (SSR / SSG), Vite

Languages: TypeScript, JavaScript (ES6+, ES2022), HTML5, CSS3, SCSS

State Management: NgRx (Store, Effects, Selectors, Actions), RxJS (Observables, BehaviorSubject, switchMap, mergeMap, catchError, debounceTime), Redux Toolkit, React Context API, Zustand

Forms & Validation: Angular Reactive Forms, Template-Driven Forms, Custom Validators, React Hook Form, Formik

Micro-Frontend Architecture: Module Federation (Webpack 5), Nx Workspaces, Feature-Based Module Separation, Shared Component Libraries, Independent Deployment

UI / Component Libraries: Angular Material, Tailwind CSS, Bootstrap 5, Styled Components, CSS Modules, Storybook-Ready Architecture, Reusable Component Design

Data Visualization: ApexCharts, Recharts, Chart.js, D3.js — Real-Time Dashboards, Dynamic Filtering, Interactive Charts

API Integration: RESTful APIs, Angular HttpClient, HTTP Interceptors, Axios, Fetch API, GraphQL (basics), JWT Authentication, OAuth 2.0

Performance Optimization: Lazy Loading, Code Splitting, OnPush Change Detection, Tree Shaking, React.lazy, Suspense, useMemo, useCallback, React.memo, Bundle Analysis, Lighthouse Optimization

Accessibility & Standards: WCAG 2.1 Compliance, ARIA Labels, Keyboard Navigation, Semantic HTML5, Screen Reader Support, Cross-Browser Compatibility

Testing: Jest, Karma, Jasmine, React Testing Library, Cypress (E2E), Postman, Lighthouse, Chrome DevTools

Build Tools & DevOps: Webpack 5, Vite, npm, Git, GitHub, GitLab, CI/CD (Netlify, Vercel), AWS (basic), VS Code

Methodologies: Agile, Scrum, Kanban, Code Reviews, Pair Programming, Pull Request Workflows, Jira, Confluence

PROFESSIONAL EXPERIENCE

Senior Frontend Developer (Freelance) | K Labs Technology & Solutions Pvt Ltd

Jan 2026 – Present

Remote, India

- Continuing as a **trusted freelance frontend partner** to K Labs — delivering Angular and React feature modules, code reviews, architecture guidance, and performance audits across ongoing client engagements.
- Designed and shipped a **production React 18 Single Page Application** using Vite, React Router v6, custom hooks (useFetch, useDebounce, useLocalStorage), Context API, and CSS Modules — achieving Lighthouse performance score 95+.
- Engineered **reusable React component architecture** with Storybook-ready isolation, Context-based theming, and code splitting via React.lazy and Suspense — enabling independent component testing and faster onboarding.
- Implemented **advanced React performance patterns** including useMemo, useCallback, and React.memo for memoization — reducing unnecessary re-renders by 40% in data-heavy views.

Senior Frontend Developer (Full-Time) | K Labs Technology & Solutions Pvt Ltd

May 2023 – Dec 2025

Remote, India

- Architected and owned end-to-end frontend delivery of **3 government-scale Angular 14–16 Single Page Applications** serving 200–500 daily active users — including Role-Based Access Control (RBAC), Reactive Forms, REST API integration, and real-time dashboards.

- Designed **micro-frontend-aligned modular architecture** using feature-based module separation and shared component libraries — reducing cross-team merge conflicts by 35% across 6 production releases.
- Prototyped **Module Federation (Webpack 5)** for seamless micro-service UI integration — enabling independent deployment of Angular feature modules with patterns directly transferable to React micro-frontends.
- Achieved **30% bundle size reduction** and **25% faster page load** through lazy loading, OnPush change detection, tree shaking, route-level preloading strategies, and Webpack bundle analysis.
- Engineered REST API integration layer using Angular HttpClient with HTTP Interceptors and RxJS operators (switchMap, catchError, debounceTime) — improving API reliability by 30% and eliminating production timeout failures.
- Built reusable **ApexCharts data visualization components** for real-time case management dashboards — enabling dynamic JSON filtering across multiple government data sources with sub-second response times.
- Implemented **NgRx state management** (Store, Effects, Selectors) for predictable application state across complex workflows — including authentication, RBAC, and multi-step approval processes.
- Maintained **comprehensive unit test coverage** using Karma and Jasmine across components, services, and pipes; integrated Cypress for end-to-end testing of critical user flows.
- Mentored **2 junior frontend developers** through structured code reviews, pair programming, and architecture sessions — reducing pull request rework by 25% and accelerating onboarding.

Frontend Developer | Box of Tech

Mar 2022 – Apr 2023

- Developed **5+ Angular feature modules** with RESTful API integration and reusable component libraries — reducing duplicate code across the codebase by 30%.
- Designed shared component libraries with clear API contracts and prop-type safety — architecture compatible with Storybook documentation workflows.
- Improved **cross-browser compatibility** across Chrome, Firefox, Edge, and Safari — cutting UI defect reports from QA by 20%.
- Implemented **WCAG 2.1 accessibility standards** with ARIA labels, keyboard navigation, semantic HTML5, and screen-reader optimization.

Junior Web Developer | Best Webmasterz

Aug 2019 – Mar 2022

- Built **10+ responsive web applications** using HTML5, CSS3, JavaScript ES6+, and Bootstrap — delivered for clients across e-commerce, education, and services sectors.
- Developed PHP / MySQL e-commerce platform with shopping cart, payment integration, and admin panel for 500+ product listings.
- Improved Lighthouse performance scores by **15+ points** through image compression, CSS refactoring, JavaScript minification, and asset optimization.

KEY PROJECTS

Hemasri Portfolio Platform (Live) | *React 18 · Vite · React Router v6 · Custom Hooks · CSS Modules · Netlify CI/CD*

- Architected and shipped a live React 18 SPA at *hemasri-dev.netlify.app* — featuring modular routing, Context-based state, and custom hooks (useFetch, useDebounce, useTheme).
- Implemented React.lazy + Suspense code splitting and memoization patterns — Lighthouse performance score 95+ across mobile and desktop.

ADTW – SC/ST Case Management Portal | *Angular 16 · NgRx · RxJS · HTTP Interceptors · ApexCharts · REST APIs · Module Federation (Prototype)*

- Architected government-grade Angular SPA serving 200+ district officers daily — role-based dashboards, RBAC authorization workflows, real-time case tracking with dynamic JSON filtering.
- Reduced initial page load by **25%** through lazy loading, OnPush change detection, and optimized REST API request handling — achieving zero production downtime across 3 release cycles.
- Prototyped Module Federation integration for micro-service UI decoupling — enabling feature teams to deploy independently without coordination overhead.

Agaram Portal – Officer Service Dashboard | *Angular 15 · RxJS · Bootstrap 5 · REST APIs*

- Delivered administrative SPA for ~500 Tamil Nadu state officers — covering leave management, transfer workflows, and reimbursement modules with multi-service REST API integration.
- Engineered dynamic filtering and reporting modules — reducing manual query processing time by **40%**.

- Produced complete technical documentation covering component APIs, data flow diagrams, and architecture — referenced across onboarding and 3 client handover releases.

TN Champions – Athlete Grant Application Platform | *Angular 16 · Angular Material · Tailwind CSS · Reactive Forms*

- Built **WCAG 2.1 compliant Single Page Application** for grant submission and multi-stage approval tracking — featuring ARIA labels, full keyboard navigation, and screen-reader optimization.
- Component library structured for Storybook integration — isolated, documented, and reusable across approval modules.

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science Engineering | 2015 – 2019

Mahendra Institute of Technology, Namakkal, Tamil Nadu, India

ADDITIONAL INFORMATION

Languages: English (Professional), Tamil (Native)

Notice Period: Immediate Joiner — Available for new opportunities

Work Preference: Remote, Hybrid, On-Site, Open to Relocation across India

Roles of Interest: Senior Frontend Developer, Frontend Engineer, Angular Developer, React Developer, UI Engineer, Full Stack UI Engineer, Lead Frontend Developer
